FSD Laboratory 01

Aim: Develop responsive web design using HTML5, containing a form. Style the pages using CSS, Use of tag selector, class selector and id selectors. Use Inline, Internal and External CSS, Apply Bootstrap CSS

Objectives:

1. To understand HTML tags
2. To learn the styling of web pages using CSS
3. To learn Bootstrap Front End Framework.

Theory: (Write down answers on pages)

1) **Define Responsive Web Design (RWD).** What is its primary goal?
2) **Explain the role of the `<meta name="viewport" ...>` tag.** Why is this tag essential for RWD?
3) **How does Bootstrap assist in creating a responsive layout?** Discuss the concept of a grid system and how it adapts to different screen sizes
4) Differentiate between Tag, Class, and ID selectors.
5) Describe the three main ways to apply CSS to an HTML document

Problem Statement: Design webpage according to your roll number don't share the data with other (Upload data on your git account)

1. E-commerce Product Page (Roll Number 1 to 12)

Design and develop a single-page e-commerce product page. The page should display a product image, title, description, price, and an "Add to Cart" button. The layout must be responsive, and the styling should use **Bootstrap CSS** for a clean, modern look. Utilize a form for user input, such as selecting a quantity or product variation, and style the page using a combination of **tag, class, and ID selectors** and **external CSS**.

2. Personal Portfolio Website (Roll Number 13 to 24)

Create a single-page portfolio website showcasing your skills and projects. The page must include sections for "About Me," "Skills," and "Contact." The "Contact" section should contain a form for visitors to send you a message. The design must be responsive, employing **Bootstrap's grid system**. Styling should be implemented using a mix of **inline, internal, and external CSS** to demonstrate an understanding of their respective uses and priority, and a variety of CSS selectors.

3. Event Registration Form (Roll Number 25 to 36)

Develop a responsive event registration page with a detailed form. The form should collect attendee information, including name, email, phone number, and a choice of workshop sessions using radio buttons or a dropdown menu. The page must be styled using **Bootstrap CSS** to create a professional and user-friendly interface. The styling for the form elements and the page as a whole should be implemented with **tag, class, and ID selectors**, primarily through an **external CSS** file.

4. Blog Post Layout (Roll Number 37 to 48)

Create a responsive web page that displays a single blog post. The page should include a title, author information, the post's content, and a comment section with a form for submitting comments. The layout should adapt seamlessly to different screen sizes. Use **Bootstrap** for the overall structure and typography. The page's design should be styled using a combination of **inline, internal, and external CSS** to style different components, such as the post title, author name, and the comment form.

5. Simple Survey Page (Roll Number 49 onwards…)

Build a responsive single-page website for a simple survey. The page should include a header, a brief introduction, and a survey form. The form should contain various input types, such as text fields, checkboxes for multiple choices, and a submit button. The entire page and its components must be styled using **Bootstrap CSS** to ensure a mobile-first approach. The styling should leverage **tag, class, and ID selectors**, with the majority of the rules defined in a separate **external CSS** file.
